Automated License Plate Reader Operating Procedure

205.1 PURPOSE AND SCOPE

This standard operating procedure provides guidelines for the operation and accessing of SMPD's Automated License Plate Reader (ALPR) program and data. This document is intended to supplement SMPD Lexipol Policy 462.

Our Department currently uses PIPs Technology hardware and software to operate our mobile ALPR units. We partner with the Northern California Regional Intelligence Center (NCRIC) to store the ALPR data we collect, and our end-users access and review this data through the NCRIC's web-based internet platform.

This Operating Procedure, along with SMPD Lexipol Policy 462, shall be posted conspicuously on our Department website.

205.2 DEFINITIONS

The following definitions for 'Operator' and 'End-User,' are listed in our Policy 462, and come from California Civil Code 1798.

"**Automated license plate recognition operator**" or "**ALPR operator**," means a person that operates an ALPR system. For our Department purposes, this will usually refer to our personnel or authorized designee operating a vehicle or other item of equipment with ALPR cameras collecting license plate data.

"**Automated license plate recognition end-user**" or "**ALPR end-user**" means a person that accesses or uses an ALPR system. For our Department purposes, this will usually refer to our personnel or authorized designee accessing historical data that is collected and stored in a centralized database(s).

205.3 ALPR OPERATOR TRAINING

Prior to the operation of the our Department approved ALPR system, any person operating the system shall complete Department approved training. The training will be coordinated by the Department Training Division, and shall include the following:

- A general review of the functionality of our vendor's software system
- The authorized purposes for operating the ALPR system.
- How to access the software system, by way of a login/password protected registry
- How our vendor maintains logs of access and use
- How our vendor retains and purges data from its system

Published with permission by San Mateo Police Department

- How our vendor maintains system security to protect collected data
- How to trouble-shoot and report basic malfunctions

Personnel using our ALPR system as operators shall complete appropriate Department approved training every 2 years. Records of this training shall be maintained by our Training Division.

205.4 ALPR END-USER TRAINING

Prior to accessing the NCRIC's online platform to review ALPR data, any person doing so shall complete Department approved training. The training will be coordinated by the Department Training Division, and shall include the following:

•A general review of how the NCRIC's platform works

•Review of the NCRIC's "Automated License Plate Reader Policy"

•The authorized purposes for accessing the ALPR system.

•How to access the software system, by way of a login/password protected registry

•How the NCRIC maintains logs of operator access and use

•How the NCRIC retains and purges data from its system

Any person(s) using the NCRIC's system as end-users shall complete appropriate Department approved training every 2 years.

205.5 ALPR SYSTEM MONITORING AND AUDITING

PIPs Technology

Data captured via the PIPs Technology PAGIS software program on our patrol mobile units are transmitted via the mobile unit's cellular connection to the BOSS server operated by NCRIC. This data is retained on the PIPs Technology processor in the mobile unit until the operator exits the software program. At that point all data recorded during that session is purged from the mobile unit as well as the PIPs Technology server.

A record of the operator's use of the PIPs Technology system is maintained by PIPs, and available for review and audit by SMPD. This record includes the following:

- The device used to capture data
- The date, time, and location of the data capture
- General information on use of the system (how many license plates uploaded to the server, etc).

The Support Services Captain, or their designee, shall conduct audits of operators use of the PIPs Technology platform on a quarterly basis to ensure compliance with Lexipol policy 462, this

Procedure, and Civil Code 1798. The results of these audits shall be submitted to the Support Services Captain for their review.

Audits should review information such as:

- Proper maintenance of system security
- Date, times, and location of operation
- Amount of license plate data collected and proper quality of data (photographs of proper quality, license plate data uploaded matches information listed in photographs, etc).
- Any other relevant information as determined by the person conducting the audit

NCRIC Platform

The security, monitoring, and auditing of data maintained in the NCRIC databases, as well as end-user review of such data is described in the NCRIC's "Automated License Plate Reader Policy." This policy is maintained by NCRIC.

The Support Services Captain, or their designee, shall conduct audits of end-users usage of the NCRIC platform on a quarterly basis to ensure compliance with Lexipol policy 462, this Procedure, and California Civil Code 1798. Our Department can obtain such data for the purposes of an audit directly from the NCRIC. The results of these audits shall be submitted to the Support Services Captain for their review.

Audits should review information such as:

- Operator usage, to include entry of system sign-on information (username, password, etc)
- Date and times of access
- Entry of required search information by the End-User (case number, etc)
- Connection between searched data and listed justification for the search
- Any other relevant information as determined by the person conducting the audit

205.6 PROTOCOL REVIEW

This Standard Operating Protocol should be reviewed on an annual basis with the Support Services Captain, or their designee, and any other person(s) as determined by the Support Services Captain.
