Success Stories

Before sunrise recently, a cyclist equipped with proper lighting was struck from behind by a vehicle that fled the scene. The collision left the cyclist with significant injuries. While investigators found no license plate at the scene, they recovered broken mirror fragments that identified the vehicle's likely make and model. By searching ALPR (Automated License Plate Recognition) databases, investigators pinpointed the suspect vehicle at a residence several jurisdictions away. The driver subsequently admitted his involvement. The Flock Safety database was a critical component of this investigation, enabling law enforcement to identify the suspect and successfully bring the case to court.

Data & Usage Summary

Data Retention

The number of days data is retained.

> **21 days**

Unique Vehicles Detected

Number of unique plate reads over the last 30 days.

> **286,380**

Number of Searches

Total user search sessions over the last 30 days.

> **165**
