TERMS & CONDITIONS

This Rough Order of Magnitude estimate is being provided for budgetary and planning purposes only. It is non-binding and is not considered a contractable offer for sale of Axon goods or services.

Tax is estimated based on rates applicable at date of quote and subject to change at time of invoicing. If a tax exemption certificate should be applied, please submit prior to invoicing.

EXCEPTIONS TO STANDARD TERMS AND CONDITIONS

Rewrite Estimates

Estimated Amounts and Contract Terminations. Any amounts stated as due under existing or terminated contracts — including contract transfer balances carried forward to new or pending contracts — are estimates based on payments received as of the calculation date. These estimates may be adjusted if new contracts are not executed on the anticipated dates or if expected payments are not made.

Refresh Shipment Timing

Technology Assurance Plan (TAP) Refresh Prior to Renewal. For Customers with expiring agreements that include TAP refresh rights, Axon may, in its discretion, ship refresh hardware under the existing contract while renewal or replacement agreements are in progress. Any such shipments will be deemed made under the terms of the existing contract until the new contract is fully executed, after which any applicable updates, fees, or adjustments will apply.

Shipment Timing

Shipment Variance . Estimated shipment dates are provided for planning purposes only and are not guarantees. Axon may ship hardware before or after the estimated shipment date, and failure to meet an estimated shipment date will not, by itself, constitute a breach, provided Axon uses commercially reasonable efforts to meet estimated shipment dates.

AXON

Axon ALPR is built around agency control, system safeguards, and an audit record the agency can review and share to meet the expectations of the communities it serves.

What Sets Us Apart

Purpose-built security

For nearly 2 decades, Axon has securely managed agencies' most sensitive data, from body camera footage to public safety records. Our solutions are purpose built to ensure security.

Agencies own and control their data

Agencies own their data outright, including how it's accessed and exported. Data stays with each agency, with access granted only at their explicit direction.

Built responsibly, from the start

Axon engages with stakeholders from the earliest stages of product design, including its Ethics & Equity Advisory Council, public safety professionals, academic researchers, and community voices. Axon takes the weight of that responsibility to communities seriously.

Federal access: There is no automatic, standing or built-in federal access to agency ALPR data through Axon.

Lawful requests: If Axon receives a lawful request, it directs the request to the agency as the data owner.

Access control: Recipient agencies' access to data they receive does not include the ability to extend that access to others. The originating agency retains full control over who can access its data.

Data security: Axon does not access agency data, other than for support requests, which are time-boxed, logged, and revoked once resolved.

Agency ownership: Agencies own all hardware - from poles, to permits, to cameras. Switching providers or adding other vendors' equipment to that infrastructure is entirely the agency's call.

KEY SAFEGUARDS

Plates, not people

Axon ALPR captures license plates, not identities — no facial recognition, no biometric matching, no profiles of people or owners. Each detection logs a plate image, a vehicle context image, basic attributes (color, make, type), and time/location, checked only against hotlists an agency has authorized.

Access permissions and search controls

Separate permissions control who can search detections and hits, manage hotlists and administer the system. Every ALPR search requires a stated reason and an offense category the agency has authorized, and each agency can choose whether to require a case number.

Agency-configured access & retention

Every data search is subject to the originating agency's authorized offense categories, and recipients see only detections matching their own hotlists. Agencies set retention independently for detections and hits, and data is automatically removed when the retention period expires.

Audit logs and reporting

Agencies can generate and export audit reports covering ALPR activity, data use, access controlled relationships and hotlist changes.

Public transparency

Agencies can publish aggregate ALPR information, including hit-alert counts and current data partnerships. The portal does not publish plate numbers, images, individual records or camera locations.

CJIS compliance & data security

Built for CJIS from the ground up. Axon Cloud Services meet the FBI's CJIS Security Policy across all 13 policy areas, with tamper-proof audit trails on every evidence access, and controls independently validated each year via SOC 2 Type 2 with CJIS validation.

ONGOING ENHANCEMENTS

Additional access controls

Expands agencies' ability to configure access, building on the existing safeguards, including requiring a full plate or case number before a search proceeds, plus other field-level requirements agencies can define.

Automated anomaly flagging and reporting

Proactively flags unusual search patterns, such as the same plate searched repeatedly or under different case numbers, for administrative review, and adds a recurring audit digest summarizing activity automatically.

Outcome reporting

Records outcomes from ALPR searches and hotlist follow-ups into standardized audit and transparency reporting, with more flexibility for agencies to filter, view, and export outcome data.

Axon is committed to listening, learning, and continuing to invest in additional safeguards to help agencies and communities realize the full lifesaving potential of this technology, while protecting the privacy of communities at large. Axon's platform also helps operationalize compliance with federal, state, and local policy — automating retention schedules and generating audit-ready reports mapped to each agency's specific regulatory requirements.

Public Safety Committee

Please see below court cases regarding automatic license plate reader technology on how it relates to the 4th amendment and privacy concerns.

Wisconsin

- *City of Horicon v. Albert*, No. 99-0729/99-0730 (Wis. Ct. App. Sept. 30, 1999) — Wisconsin Court of Appeals held a random license-plate check was not a search and recognized no reasonable expectation of privacy in a publicly displayed plate.
- *State v. Folkman*, No. 2013AP1363-CR (Wis. Ct. App. Dec. 17, 2013) — unpublished decision holding that querying registration/license information did not invade a reasonable expectation of privacy.

Seventh Circuit

- *United States v. Tuggle*, 4 F.4th 505 (7th Cir. 2021) — prolonged pole-camera surveillance did not constitute a search.
- *United States v. House*, 120 F.4th 1313 (7th Cir. 2024) — reaffirmed *Tuggle* and declined to adopt the mosaic theory.
- *United States v. Hammond*, 996 F.3d 374 (7th Cir. 2021) — important Seventh Circuit treatment of *Carpenter* and the comparison between *Knotts*-type surveillance and more comprehensive tracking.
- *Scholl v. Illinois State Police*, No. 25-1847 — direct ALPR appeal pending in the Seventh Circuit; oral argument occurred September 29, 2026.

U.S. Supreme Court

- *United States v. Knotts*, 460 U.S. 276 (1983) — monitoring vehicle movements on public roads using a beeper did not constitute a search.
- *United States v. Jones*, 565 U.S. 400 (2012) — physical installation and use of GPS on a vehicle constituted a search.
- *Carpenter v. United States*, 585 U.S. 296 (2018) — seven days of historical CSLI constituted a search because it provided an extensive chronicle of the defendant's movements.

Recent ALPR authority

- *United States v. Porter*, No. 25-60163 (5th Cir. Mar. 17, 2026) — direct appellate holding that the ALPR system at issue did not constitute a Fourth Amendment search.
- *Schmidt v. City of Norfolk*, No. 2:24-cv-00621 (E.D. Va. Jan. 27, 2026) — summary judgment for the City; Flock ALPR system did not constitute a search on the developed record.
