Subject: Fw: Axon Fusus Release Notes 2026.26
From: Anthony Riccardi <ARiccardi@cityofsanmateo.org >
To: Ed Barberini <ebarberini@cityofsanmateo.org >; Kelly O'Keefe <kokeefe@cityofsanmateo.org >; Daniel Sanchez <dsanchez@cityofsanmateo.org >; Stephan Casazza <casazza@cityofsanmateo.org >;

Just a heads up here is a release from Axon regarding the sharing of ALPR data. Steve, can we get together and talk about what our sharing agreement looks like for Axon. This will be for Fleet 3 and Axon Outpost.

AXON FUSUS RELEASE NOTES

Release Version: 2026.26

Features and Enhancements

Web Experience

ALPR Sharing
Law enforcement agencies using Axon Fusus can now securely share ALPR data with specific partner agencies without copying any data out of their own system, enabling faster mutual-aid and regional collaboration while the data owner stays in control.

Agencies can:

- Invite a specific partner agency to share ALPR data — sharing is always donor-initiated, and the recipient must separately accept before anything is shared.
- Limit what's shared using two independent conditions: only reads matching the recipient's hotlist (the default), specific Axon device types, or both.
- Require every cross-agency search to declare a matching offense category before a donor's data is included in results.
- Revoke a sharing relationship at any time.
- Review a full audit trail of sharing activity, from both the donor and recipient side.

Availability: US1

ALPR Audit
Agencies using Axon Fusus now have expanded visibility into how ALPR data is used — by their own users, by partner agencies receiving shared data, and through changes made to hotlists and sharing relationships.

Agencies can:

- Run four dedicated reports from the LPR Audit page: Internal ALPR Activity (your own users' searches, exports, and record access), Network ALPR Activity (how partner agencies used data you shared), ALPR Data Sharing (the full sharing-relationship lifecycle), and the ALPR Hotlist Management Audit Report (hotlist changes).
- See every access or download of an ALPR record inside Select

Region - Axon alongside Fusus activity, in one unified audit trail.
- See additional fields captured automatically on relevant searches to support certain state-specific requirements (for example, camera location or camera count).

Availability: US1 using Sign In with Axon with the ALPR System Administration permission assigned. Expansion to CA1 and US4 is expected 8/11.

Enterprise and law enforcement camera sharing

U.S.-based enterprise and law enforcement customers can now securely share cameras with one another in Axon Fusus, simplifying collaboration during planned events and mutual-aid responses.

Fusus administrators can:

- Share cameras across enterprise and law enforcement organizations.
- Configure access permissions, including live viewing, recording playback, and optional expiration dates.
- Accept, manage, or revoke shares from the **Shares** administration page.
- Camera owners retain control:
  - Only the organization that owns a camera can create, modify, or revoke access to it.
  - Access is never granted automatically. Recipient organizations cannot reshare cameras or grant access to another organization.

For more information, see the updated Camera Setup and System Administration articles on our Help Site.

Availability: US1, US4

Fusus 911 Audio Playback Controls

Operators can now review both live and ended 911 call audio directly within the 911 call panel using new playback controls. Advanced controls — including play, pause, 10-second rewind/forward, and timeline scrubbing — are collapsed by default, with mute and volume controls always visible.

On a live call, audio plays from the live position by default. If you scrub

backward, a Return to Live tooltip lets you jump back to real time. On an ended call, playback starts from the beginning and displays the total call duration. Note that playback position does not persist when switching between calls — each call resets to its default starting point (live for active calls, zero for ended calls) on return.

These controls support rapid review of critical moments, real-time incident monitoring, and post-incident analysis without interrupting live call processing.

Learn more at 911 call panel.
Availability: US1

Alerts Panel toggle update

Alerts panel Location filter contains new toggle: "Show alerts not tied to a Fusus location" on by default, which lets you include or exclude real-time alerts that aren't associated with a named Fusus location.
Availability: All regions

New connection banner notification

Improved livestream messaging so users are clearly informed when a poor connection may affect video quality.
Availability: All regions

Maintenance and Bug Fixes

Correct Appliance Type name on Fusus Appliance Dashboard

Appliance types now show friendly display names instead of internal code names.

CAD drawer fix

Fixed a crash that occurred when reopening the CAD drawer after closing it.

CAD alerts appear in real time

Fixed an issue where CAD alert toasts could stop appearing in real time when the Axon Devices layer was active on an Agency/Legacy SSO account, while calls were still being processed normally in the background.

Map layer preference now remembered on login

Map layer preferences are now applied when you first log in, so any layers you have turned off will stay off.

Incident Management tab viewable in VAULT
Fixed an issue where administrators could not see the Incident Management tab in fususVAULT.

Changed the behavior of ALPR hotlist filters
When no filters are selected, all alerts matching those hotlists are now excluded from results. Previously, having no filters selected behaved the same as selecting all of them (i.e., nothing was excluded).

Mobile (iOS and Android)

iOS Features and Enhancements

- None

iOS Bug Fixes and Maintenance

- **Alerts**: Signing out now stops alert notifications. Once you sign out, no further alerts are delivered to the device.
- **Body-camera livestreaming**: Axon body-camera livestreams now start automatically when you open the livestream card while the camera is recording, so there's no extra tap to begin watching.
- **Camera livestreaming**: Livestreams from Fusus and external-appliance cameras now start more reliably.
- **Chat**: You can now close a PDF attachment after viewing it and return to the conversation.

Android Features and Enhancements

- None

Android Bug Fixes and Maintenance

- This update improves the reliability of the Axon device list and map. The list and map now load consistently, including when a Fleet Hub device has no vehicle assigned.
