Thank you for your interest in public records of the City of San Mateo. Your request was received by the City of San Mateo on 5/14/2026 and given the reference number **W012742-051426** for tracking purposes.

Record(s) Requested: **Pursuant to the California Public Records Act (Gov. Code § 7920.000 et seq.), I request the following records from the San Mateo Police Department.**

This request seeks existing records only (Gov. Code § 7922.530; Sierra Club v. Superior Court (2013) 57 Cal.4th 157).

Context

As you are aware, on 2026-04-28 SMPD produced a Flock platform event log under W012570-041926 ("SMPD4.20.2026_EVENTLOG") containing two events involving "Receiving Organization: University of the Pacific (CA)":

- Event ID 7ede5f4e-4f97-56dc-9357-4b92d3904374 — 2026-02-12 04:51:19.301Z — create networkShare — Permissions: feedView — User: Phoenix O'Rourke
- Event ID 5469f801-e05e-5c39-ace6-0ce9abf1106a — 2026-02-28 04:09:40.789Z — delete networkShare — Permissions: Search, VMS, Hotlist — User: Steve Casazza

The permission scopes on the two events differ: the create event memorialized feedView only; the delete event memorialized Search, VMS, Hotlist. On the face of the log, there is no event memorializing how Search, VMS, Hotlist permissions came to be associated with that share between 2026-02-12 and 2026-02-28.

PRA W012664-050426 (filed 2026-05-04) sought records resolving that gap. Each item in W012664 was scoped beyond the W012570 production: Item 2 expressly sought "any further events of any type (create, update, modify, permission change, delete, or otherwise) for that same entity and period" beyond the

two events W012570 had produced; the W012664 context paragraph noted that "any modification events would also be responsive to PRA #W012570-041926" — meaning if such records exist, they should have been produced under W012570 but were not, and the W012664 search was being asked to locate them.

On 2026-05-14, SMPD closed W012664 with the response "Responsive documents were previously provided to you under PRA #W012570-041926" for Items 1, 2, and 3, and produced two new attachments: UOP_Termination.png (a screenshot of the same 2026-02-28 delete event already in the W012570 EVENTLOG) and Role_Permissions_Overview.pdf (a Flock help-center article on intra-organization user-role permissions).

SMPD's W012664 response treats the two events previously produced under W012570 as themselves responsive to a request that was explicitly scoped beyond those two events. That position does not address (a) the absence in the W012570 EVENTLOG of any event memorializing the permission expansion from feedView to Search, VMS, Hotlist; (b) the current state of any SMPD-UOP networkShare relationship as of the date of production; or (c) which of the three readings the W012664 Item 3 letter posed — (i) the 2/12 share was terminated without an event-log entry, (ii) the 2/12 share remains active, or (iii) the 2/12 create and 2/28 delete refer to the same share whose permissions were modified between those dates — describes what happened.

Separately, Role_Permissions_Overview.pdf is not responsive to W012664 Item 4. That document describes the permissions a Flock Admin can grant to users within a single organization's own Flock account — e.g., which users in SMPD's account may execute Search queries, manage Hot Lists, view FlockOS, etc. W012664 Item 4 asked for documentation of the cross-organization networkShare permission types — feedView, Search, VMS, Hotlist as they appear in the EVENTLOG entries memorializing SMPD's network share with UOP — and specifically "what data access, query capability, or live-feed visibility each grants to a receiving organization." The networkShare permission types are vendor-side cross-organization sharing semantics; the user-role permissions described in the produced document are vendor-side intra-organization access controls. They are different vendor concepts and the produced document does not describe the former.

Cross-references. W012570-041926 (closed 2026-04-28; produced the original event log), W012664-050426 (closed 2026-05-14; this follow-up). Distinct from W012674-050426, which concerns Policy 463.8(b) authorization records for the 2026-02-12 create event itself.

Records requested — covering the period from 2026-02-12 through the date of production, except where otherwise noted:

1. Event-log entries between the two known UOP events. All Flock platform event-log entries — of any event type — referencing University of the Pacific (CA) as a receiving organization, sharing partner, network-share entity, or otherwise associated entity, between 2026-02-12 04:51:19 UTC and 2026-02-28 04:09:40 UTC (the timestamps of the two events produced under W012570). For the avoidance of doubt: records previously produced under W012570-041926 — specifically, Event ID 7ede5f4e-4f97-56dc-9357-4b92d3904374 and Event ID 5469f801-e05e-5c39-ace6-0ce9abf1106a — are not responsive to this item. This item seeks records that have not been previously produced. If no responsive records exist within that time window, please affirm that the Flock platform event log was searched for that window and contains no event-log entries referencing UOP other than the two endpoints.

2. Permission-modification records for the 2026-02-12 networkShare. Records reflecting how Search, VMS, or Hotlist permissions came to be associated with the SMPD-UOP networkShare entity that existed on or before 2026-02-28 — including (a) any Flock platform event-log entry memorializing the addition or modification of permissions on that share; (b) any administrator action record (within the platform Admin interface or otherwise) reflecting a permission change to that share; (c) any internal SMPD communication concerning the permission change (email, Teams or chat message, ticket, work order); and (d) any communication with Flock Safety or NCRIC concerning the permission change. If no responsive records exist, please affirm whether the Department's position is that (i) the Search/VMS/Hotlist permissions were added without an event-log entry being generated by the platform; (ii) the 2026-02-12 create event and 2026-02-28 delete event refer to two separate networkShare entities; or (iii) another explanation describes the discrepancy.

3. Current-state records for any SMPD-UOP networkShare on the Flock platform. Records reflecting the current state, as of the date of production, of any networkShare, network sharing entitlement, or equivalent data-sharing relationship between SMPD and University of the Pacific (CA) on the Flock Safety platform. For the avoidance of doubt: records previously produced under W012570-041926 are not responsive to this item — those records reflect the state of the event log as exported on 2026-04-20, not the current state as of the date of production. Responsive records include (a) a current screenshot or export of the SMPD network-shares administrative page or equivalent list showing all current sharing partners; (b) a current platform query result showing whether any networkShare with UOP exists; or (c) a screenshot or export sufficient to confirm that no networkShare with UOP currently exists.

4. Communications with Flock Safety or NCRIC specifically concerning the UOP networkShare permission discrepancy. Records of any communication between SMPD and Flock Safety, or between SMPD and NCRIC, specifically addressing (a) the permission-scope discrepancy between Event ID 7ede5f4e-4f97-56dc-9357-4b92d3904374 (2026-02-12, feedView) and Event ID 5469f801-e05e-5c39-ace6-0ce9abf1106a (2026-02-28, Search/VMS/Hotlist) on the SMPD-UOP networkShare; or (b) a request to Flock Safety or NCRIC to explain how Search, VMS, or Hotlist permissions came to appear on the 2026-02-28 delete event when only feedView was recorded at the 2026-02-12 create event.

Note on search scope: this item seeks a specific, directed communication — a support request, engineering inquiry, or equivalent — referencing the UOP networkShare or the event IDs identified above. It does not require a search of the full @flocksafety.com or @mail.flocksafety.com email corpus. Camera-sharing notifications, marketing emails, product updates, account management messages, and other routine vendor correspondence are not responsive and need not be reviewed. If SMPD never sent or received a communication specifically addressing this discrepancy, "no responsive records" is a complete and accurate answer to this item — no rolling production is required.

5. Documentation of platform event-logging behavior for permission modifications. Vendor documentation in SMPD's possession describing whether and how the Flock platform records permission modifications to an existing networkShare in the platform event log — including (a) what event type is generated when permissions are added to or removed from an existing share; (b) whether such modifications generate any event-log entry at all; and (c) the data fields associated with such an event.

6. Vendor documentation of the cross-organization networkShare permission types. Vendor documentation in SMPD's possession describing what the feedView, Search, VMS, and Hotlist permission types — as those terms appear in networkShare event-log entries memorializing data sharing between SMPD and a receiving organization (here, University of the Pacific) — grant to a receiving organization. Responsive documentation describes the data access, query capability, live-feed visibility, alerting capability, or other functionality the receiving organization obtains when SMPD's networkShare to that organization carries each named permission. For the avoidance of doubt: Role_Permissions_Overview.pdf (produced under W012664-050426) describes intra-organization user roles within a single agency's own Flock account and is not responsive to this item. This item seeks vendor documentation of cross-organization networkShare semantics: what a feedView share, a Search share, a VMS share, or a Hotlist share to another organization actually enables that other organization to do with SMPD-originated data. Responsive sources include Flock help-center articles, administrator guides, networkShare configuration documentation, sharing-tab interface documentation, or any equivalent vendor reference materials in SMPD's possession addressing the cross-organization sharing model.

Anticipated exemption issues

- Civil Code § 1798.90.55(b). The records requested describe sharing-configuration metadata — share identifiers, permission scopes, lifecycle events, vendor documentation, current-state confirmations, and internal/vendor communications — not "ALPR information" as defined in § 1798.90.5(c). SMPD's productions under W012570-041926 and W012664-050426 (UOP_Termination.png) included configuration metadata of this exact type.
- Gov. Code § 7923.600 (investigation records). The records concern administrative configuration and operational lifecycle of a data-sharing platform, not files compiled for any particular SMPD investigation, and contain no plate data or investigative content.
- Records held by Flock Safety. Per the scope-of-records argument previously accepted in W012570-041926 and W012664-050426, share-lifecycle records and current-state records held within Flock on SMPD's behalf are SMPD records under Gov. Code § 7920.530 and City of San Jose v. Superior Court (2017) 2 Cal.5th 608.
- "Previously produced" as a basis for non-response. A response that responsive records were previously produced under another PRA is not, on its own, a complete answer where the present request was scoped beyond that prior production. The W012664 filing explicitly distinguished "further events" from the two events produced under W012570. To the extent any item of this request is answered with reference to a prior production, please identify the specific previously-produced record or records that the Department considers responsive to that item, and confirm that no further responsive records exist beyond those.
- Segregability (Gov. Code § 7922.525(b)). Gov. Code § 7922.525(b) requires production of any reasonably segregable portion of a record after deletion of exempt portions. Items 1 through 6 are administrative configuration data, vendor communications, and platform-behavior documentation containing no investigative content; if any individual record contains both responsive and exempt content, the non-exempt portions are subject to that requirement.

- Existing records only / no obligation to create new records (Gov. Code § 7922.530). This request seeks existing records only. If no responsive record exists for any item, that itself is a responsive answer; please affirm the search performed.

If any portion is denied, please:

- 1. provide specific exemption citations per Gov. Code § 7922.540;**
- 2. identify the withheld record type and volume;**
- 3. indicate whether the denial rests on a claim that the records are held by Flock Safety, NCRIC, or any other party rather than SMPD; and**
- 4. if any item is answered by reference to a prior production, identify the specific previously-produced record and confirm no further responsive records exist beyond it.**

Thank you.

The request is being forwarded to appropriate department(s) for processing.

Monitor request progress at the link below. The City will email you when the request is complete. Thank you for using the San Mateo Records Center.

To monitor the progress or update this request please log into the [San Mateo Records Center](#).
