

South San Francisco considers license plate reading cameras

City Council looking at surveillance measure in hopes of deterring crime near hotels

South San Francisco could be the next city in the county to install vehicle-monitoring cameras along major transit arteries in hopes of catching criminals and deterring future crimes, with the City Council this week expressing its approval for the law enforcement tool.

The council Tuesday was presented with a plan to place 25 cameras, called automated license plate readers, or ALPRs, near on- and off-ramps along Highway 101 and Interstate 380. The cameras would be capable of collecting plate numbers and cross referencing them with a “hot list” of vehicles involved in crimes, as well as using artificial intelligence to determine and record vehicle make, model and color.
