City of Verona votes to not renew Flock cameras

Nov 11, 2025

VERONA, Wis. (WKOW) — The City of Verona Common Council has voted against renewing contracts for police data-collecting cameras known as Flock cameras.

There are three Flock cameras in Verona that collect data such as vehicle makes, models, and license plates to assist police in identifying suspects. However, residents have expressed concerns about data security, potential federal government access, and the risk of technological misuse.

"Data this valuable will be targeted by hackers," said one speaker. "Once your movement history is exposed, there's no getting it back. The safest measure is to simply never have this data collected in the first place."

Police have highlighted the success of Flock cameras in locating offenders, and added that they have used license plate recognition technology for more than a decade. They assured the council that Flock data is only stored for 30 days and measures are in place to ensure its safety.

"We've opted out of sharing data with federal agencies," said Verona Police Chief David Dresser. "We understand the concerns there. We have revoked automatic access to our data from out-of-state agencies to address some of the privacy concerns."

The council's decision means the contracts for the cameras will not be renewed. Police noted these contracts are set to expire in April and July of 2026.
