San Francisco Police Audit Shows Feds ‘Improperly’ Accessed License Plate Data Hundreds of Times

The revelations are likely to intensify criticism of San Francisco’s partnership with Flock Safety, a leading company behind the surveillance technology used nationwide to stop crime.

San Francisco’s [license plate reader](#) data has been improperly accessed hundreds of times by out-of-state and federal agencies since last May, police officials said Wednesday.

The San Francisco Police Department said that an audit of the [controversial surveillance technology](#) — which some Bay Area cities have abandoned over data-sharing concerns — revealed that San Francisco introduced automated license plate readers operated by Flock Safety in 2024, and the department has credited the technology with “revolutionizing” the way it solves crimes and

But the revelations from the audit have already drawn renewed scrutiny of the partnership — after cities across the Bay Area have [reconsidered](#) or [terminated contracts](#) in the last year following

Under a 2015 state law, California public agencies are barred from sharing license plate reader data with federal and out-of-state agencies, and they are subject to strict privacy policies on such data. “Local law enforcement continue not to care, not [to] pay attention to these sensitive databases that we have,” said Brian Hofer, whose nonprofit, Secure Justice, sued Oakland over reports of

Hofer said Secure Justice has been warning about illegal inquiries for years.

“This was always a known speculative concern, and for the last two-and-a-half years of doing audits, it’s been a proven concern,” he said.

NCRIC Executive Director Mike Sena said the organization’s protocol is not to share data with federal and out-of-state agencies. He said that was not part of WSIN’s protocol before the audit,

In a statement, a Flock spokesperson said the breach “was not the result of a software malfunction, platform issue, unauthorized access or any failure of the Flock system. It involved searches

It’s not clear, according to Lew, if any of the outside organizations accessed any SFPD data. Not every query “hits,” or leads to relevant information, he explained.

Among the searches, he said, were queries related to criminal activity and “serious” crime, including homicide, child sexual abuse and drug and gun trafficking.

Lew said the “queries of concern” conducted by NCRIC don’t include any that reference immigration enforcement or reproductive rights. He confirmed that the department is not aware of dat

“They just stopped putting things in writing,” he said. “Before all these public record requests and scandals started blowing up, people were actually honest. When they would do a search for I

In December, a federal law enforcement agency in Texas told local officers to be as “vague as permissible” in their Flock database searches, instructing them to say it is for the purpose, for exa
