TERRENCE O'BRIEN

Axon is being sued over its AI license plate reading cameras. LA recently decided to move forward with installing hundreds of Axon's ALPRs after it cut ties with the scandal-plagued Flock. Now Axon is facing a class action suit, suggesting people's problem is less with Flock specifically and more with the AI-powered surveillance state in general. According to *Reuters*:

> The lawsuit, filed on Tuesday in federal court in San Francisco by law firms Hausfeld and Gibbs Mura, alleges Axon has failed to comply with a California privacy provision by not disclosing how it collects, uses and shares plate data gathered through its camera systems. "Axon has created a mass-surveillance infrastructure that is practically impossible to avoid," the lawsuit said.
