

technologies, including Automated License Plate Readers (ALPRs), as a means of providing both real-time assistance to officers during active incidents and investigative support to detectives during criminal investigations. The MPD ALPR network also serves as an additional layer of protection for both Murfreesboro residents and visitors by assisting in identifying vehicles connected to crimes and increasing solvability.

ALPRs capture images of vehicles, which are stored securely for only 30 days, after which they are permanently deleted. Importantly, ALPRs are not used as an automated traffic enforcement tool, nor does the LPR system access personal information. ALPR technology does not identify drivers or passengers, nor does it directly access any license plate databases, ensuring that no personal data can be retrieved from ALPR systems. Instead, it alerts RTCC analysts, MPD officers, and dispatchers when vehicles associated with criminal activity appear on a hotlist, such as those generated by the National Crime Information Center (NCIC). These hotlists include wanted persons, missing people and children, stolen plates, stolen vehicles, and other vehicles directly connected to criminal investigations. ALPRs are also utilized by the MPD RTCC to safeguard the community by addressing various crimes including homicide, kidnapping, robbery, aggravated assault, burglary, and motor vehicle theft.

These systems are also designed to foster collaboration with the community. Local neighborhoods and businesses can partner with MPD and the RTCC, integrating
their systems with MPD to contribute to a safer community. To be transparent and ensure proper usage and guardrails are in place, MPD has made the following policies and usage information available to the public.

# Community Impact

## Data & Usage Summary

**Hotlists Alerted On**

National and statewide hotlist sources.

> NCIC, NCMEC Amber Alert
