Good morning Lt Riccardi,

Hope you had a great holiday weekend. Just wanted to check in on my previous email to see if there is any additional info we could help with to support you and your team. Thank you!

Subject: Axon Outpost-San Mateo PD

Hi Lieutenant Riccardi,

It was great speaking with you last week. As we discussed, I wanted to follow up with a brief comparison of Axon Outpost and your current ALPR solution, along with the attached data governance overview, which I think you'll find helpful as you continue evaluating your options.

As you're aware, Axon Outpost is more than an ALPR camera. It combines fixed ALPR with livestream video, with video recall for solar deployments currently planned for release in September 2026, providing both investigative and situational awareness capabilities in a single device.

One of the key differences is Axon's approach to data governance. With Axon, your agency owns and controls its data and devices. It resides within your agency's secure Evidence.com environment, not pooled into a shared network, and is never shared without your agency's authorization. Legal requests including subpoenas, warrants, and public records requests are directed to your agency, not Axon. The attached document (pg 4 of 6) that outlines these differences side by side and may be a useful resource for discussions with leadership, IT, or your council.

I also wanted to mention that Daly City has begun its Outpost deployment, and sharing through Fusus is will be available by the end of July. If you decide to participate, your agency would be able to coordinate and share reads with Daly City on an invitation-only basis for both Fleet and Outpost devices.

I've also included a comparison image below showing captures of the same vehicle from both platforms(Outpost capture with enhanced plate on left side). In addition to image quality, Axon Outpost provides native interoperability with Fusus, guaranteed three-lane coverage, livestream

integration, and technology refreshes throughout the agreement, including a full hardware refresh in year five.

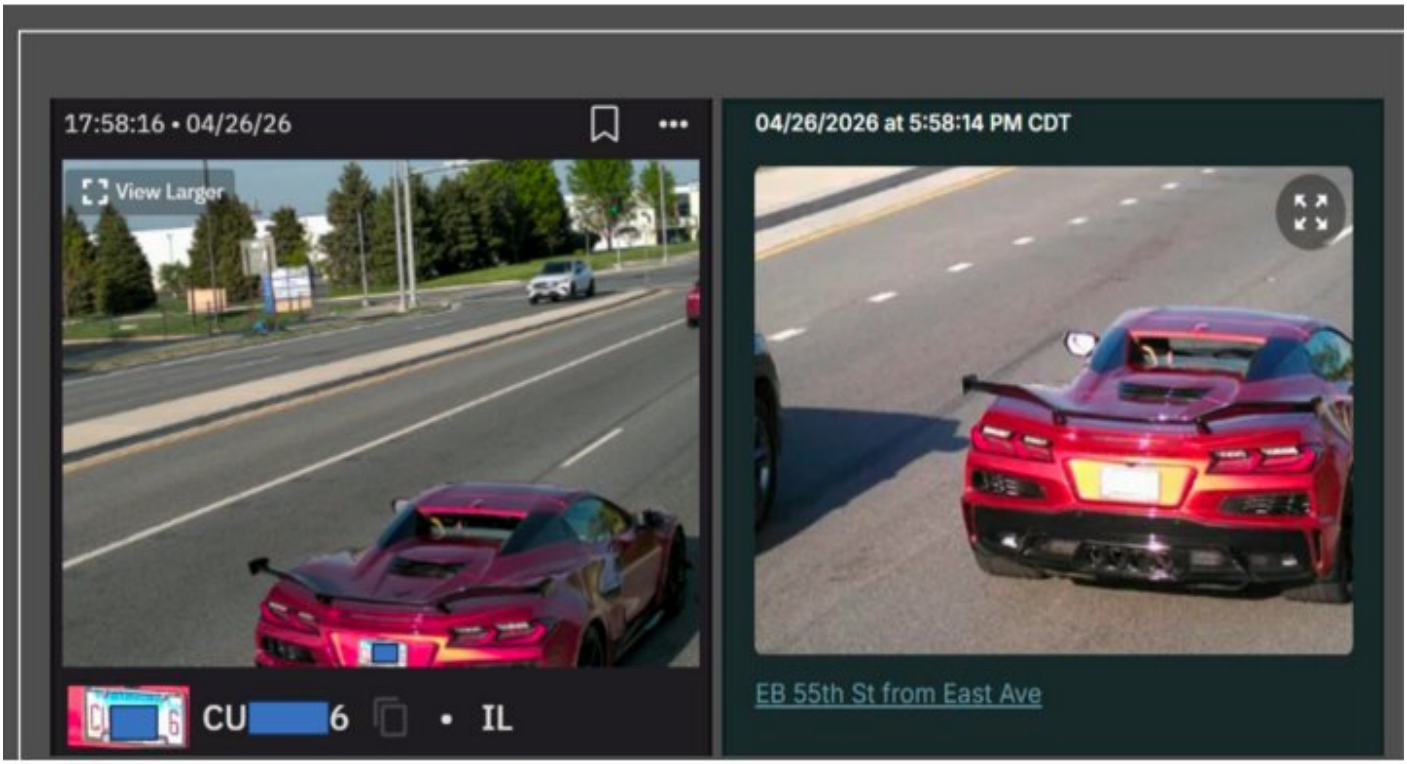

We have also received positive feedback from agencies that have independently evaluated both platforms. While one agency was unable to share its formal comparison externally, its findings were consistent with the capabilities we've discussed.

Since your agency is already leveraging the Axon and Fusus ecosystem, adding Axon Vehicle Intelligence extends your existing investment using the same platform, governance model, audit trail, and user experience without introducing another vendor or creating an additional data silo. Axon has spent more than 20 years securing some of the most sensitive public safety data in the industry, and that experience has shaped the governance and security model we provide today.

If it would be helpful, Tierney and I would be happy to schedule a follow-up discussion. We can also include members of our Government Affairs or Product teams to answer questions related to policy, legislation or data governance

Please let us know if there's a time that works well for you, and we'll be happy to coordinate.

Thanks again and have a great 4th of July weekend,

Patrick Newton
