San Mateo Police Department A

Executive Cost and Strategic Summary

Vendor	Core ALPR Cameras	Supplemental Video	PTZ / Live Video	Quoted / Normalized Term
Flock	54	10 solar fixed-video cameras	2 LTE PTZ cameras	120 months
Axon	54	Outpost integrated livestream/context	12 Lightpost PTZ plans	101 months
Motorola	54	L6D supports integrated color video; not priced	No PTZ package priced	60-month public benchmark

Decision Highlights

Cost	Axon has the lowest normalized core 54-camera cost. Flock is second; Motorola's public 5-year
Integration	Axon has the strongest fit because SMPD already uses Axon body-worn cameras, Fleet 3, Evide
Political defensibility	Axon's agency-controlled architecture is easiest to explain publicly. Flock and Motorola offer ag
Deployment maturity	Flock has the most mature turnkey fixed-camera deployment model. Motorola has a mature LP
Operational capability	Axon offers the strongest unified workflow. Flock offers rapid solar/LTE deployment and a mat
Recommendation	Use Axon as the preferred option subject to a field pilot, corrected quantities, enforceable Calif

Important: Flock pricing combines four supplied quotes to reach 54 ALPR cameras: 40 cameras at $2,750, 13 cameras a Motorola is a normalized public benchmark, not a San Mateo-specific quote.

LPR Vendor Comparison

Core Annualized Cost	Full Package Annualized Cost	5-Year Core Cost	Weighted Score	Preliminary Fit
$152,000	$163,000	$760,000	3.30	Strong alternative
$135,205	$193,997	$676,024	4.45	Best ecosystem fit
$206,194		$1,030,972	3.15	Technical benchmark

benchmark is highest.

Motorola

Comprehensive Operational and P		
Category	Flock	Axon
Primary platform	FlockOS fixed ALPR and video ecosystem	Axon Vehicle Intelligence, Evidence and Fusus
Quoted / modeled configuration	54 ALPR, 10 solar fixed-video, 2 PTZ	54 paid Outpost plans and 12 Lightpost PTZ plans
Power and connectivity	Solar/LTE, infrastructure-light	Solar Outpost; Lightpost uses streetlight infrastructure/connectivity
Live video / context	10 supplemental fixed-video cameras plus 2 PTZ	Outpost livestream/context plus 12 Lightpost PTZ
Analytics	Plate and vehicle-characteristic searching; regional network value	Plate, vehicle attributes, livestreaming and unified Fusus/Evidence workflows
Data ownership	Customer owns data; vendor access limited to service delivery	Agency owns and controls ALPR data
Retention	30-day retention identified in supplied quotes	Agency-configured, automatically enforced
Sharing model	Permission-based network sharing; California restrictions must be technically enforced	Sharing off by default, invite-only, visible, revocable and time-bound
Federal / out-of-state access	Flock states federal sharing is disabled by default and California agencies are restricte	No centralized pool or automatic federal access in supplied governance material
Auditability	Search and access logs; external sharing requires close supervision	Immutable Evidence logs and Fusus audit reporting
SMPD integration	Separate platform; integration continuity must be contractually confirmed	Native fit with body cameras, Fleet 3, Evidence and Fusus

olitical Comparison

Motorola	SMPD Assessment
VehicleManager with L6Q/L6D/L5F portfolio	Axon provides the cleanest continuation of SMPD's existing environment.
54-camera L6Q cost normalized from a 44-camera public benchmark	Motorola requires a San Mateo-specific quote before final ranking.
Solar, AC/DC, pole tap and battery options depending on model	All support flexible deployment; site-by-site engineering remains necessary.
L6D combines multi-lane LPR and color security video; L6Q benchmark is ALPR-focused	Axon has the strongest quoted live-video scope.
VehicleManager association, convoy, location and AI-assisted vehicle searches	Motorola has the deepest stand-alone analytics; Axon has the best workflow integration.
Customer owns collected data and controls access	All three can support agency ownership if contracts match vendor representations.
Agency-controlled retention	Require 30-day automatic deletion across every product and exported record.
Agency-controlled sharing within VehicleManager; broad shared/commercial data options	Axon is easiest to explain as a local-control model.
Agency controls its data, but broader network access requires careful contractual limits	Technical blocking, audit logs and no indirect searches should be mandatory.
Agency-managed controls and CJIS-hosted law-enforcement platform	Axon is best aligned with SMPD's existing Evidence/Fusus audit processes.
Separate VehicleManager environment; integration must be demonstrated	Axon is the clear leader.

Deployment maturity	Highly mature turnkey fixed-camera model	Mobile ALPR mature; fixed Outpost/Lightpost comparatively new
Contract duration	120 months	101 months
Installation and support	Subscription model; exact implementation inclusions should be confirmed	Quote expressly includes installation, maintenance, warranties and refreshes
Political advantages	Predictable subscription; broad regional utility; 30-day retention	Unified accountability story; local-control architecture; existing trusted system
Political disadvantages	Highest current scrutiny over networked ALPR sharing and surveillance perception	Vendor concentration, long lock-in and newer fixed-camera product
Operational advantages	Rapid solar/LTE deployment, mature network and straightforward scaling	Single sign-on/workflow, unified evidence, live operations and audit environment
Operational disadvantages	Separate accounts, exports, audits and training from Axon environment	Single-vendor dependency and fixed-product maturity must be tested
Overall position	Strong alternative	Preferred, subject to pilot and contract revisions

Mature LPR portfolio with quick-deploy, fixed and dual-purpose models	Flock leads fixed deployment maturity; Motorola offers broad technical maturity.
60-month public benchmark	Long Flock and Axon terms increase lock-in risk.
Benchmark includes installation, monitoring cellular, warranty and replacement	Axon and Motorola scope is clearer in available pricing documents.
Established public-safety vendor; flexible camera portfolio; agency data control	Axon has the strongest council-facing narrative for San Mateo.
Broader Vigilant network and commercial/shared datasets may draw scrutiny	Any selection requires transparency, public reporting and strict sharing controls.
Advanced analytics, multiple camera types and flexible power/deployment options	Axon reduces daily friction; Flock and Motorola offer specialized strengths.
Separate platform, higher benchmark cost and no San Mateo quote	Pilot testing should measure accuracy, alert latency, uptime and evidence workflow.
Technical and pricing benchmark	Axon ranks first for SMPD; Flock second; Motorola third pending a direct quote.

Caveat
Used as 54th ALPR camera
Installation fees not separately priced
Supplemental video, not separate ALPR
Treated as bundled ALPR + PTZ quote
Quote contains quantity inconsistencies that require clarification
Vendor-provided governance claims
Normalized to 54 cameras; not a San Mateo quote
Specifications may vary by deployment
No pricing included
Broader shared datasets require governance review
Vendor-provided governance claims
Legal review should confirm current requirements
Vendor statement; contract and technical validation still required
Fixed ALPR platform is comparatively new

Axon Fusus official page	Axon	Unified live map with ALPR overlays and video feeds
