In January 2026, the Cheyenne County Sheriff's Office began utilizing FLOCK License Plate Reader (LPR) cameras on a trial basis as an additional investigative and public safety tool. Following several months of documented use and evaluation, the Sheriff's Office will continue utilizing the cameras to better assist our citizens and support law enforcement operations throughout Cheyenne County.

WHAT IS FLOCK?

Flock Safety is a network of license plate-reader (LPR) cameras that capture vehicle license plates in real time. The system helps support law enforcement in identifying vehicles connected to crime. The main objective of the FLOCK camera program is simple: to help keep our citizens and their property safe. We have six cameras set up to provide deputies with an additional tool to assist in locating suspect vehicles, recovering stolen property, supporting criminal investigations, and enhancing overall community safety.

Since implementation, FLOCK LPR technology has assisted Cheyenne County deputies and partnering agencies in investigations involving serious crimes and

public safety threats. We have apprehended a murder suspect, recovered two motor vehicles, found two missing persons, recovered stolen property, and arrested wanted fugitives.

What does Flock NOT DO?

The cameras are not used to “track” individuals. Law enforcement must have a valid reason to search the system, including a case number. Data is stored for 30 days, unless it is flagged for an active investigation. Your privacy is protected! Flock cameras only capture photos of your license plate. Not images of the driver or passengers. Data is securely stored, and only law enforcement has access to it. Flock cameras capture vehicle information such as license plates and vehicle characteristics to assist with criminal investigations and investigative leads. These cameras are not a speed enforcement tool and do not issue speeding citations. Their purpose is investigative in nature and focused on enhancing public safety.

The Cheyenne County Sheriff’s Office understands the importance of transparency and accountability when utilizing technology. For that reason, the use of FLOCK cameras is audited every 60 days to ensure compliance with policy, appropriate use, and continued effectiveness as a law enforcement resource.

The Sheriff’s Office remains committed to responsibly utilizing technology that supports criminal investigations, strengthens interagency cooperation, and improves our ability to respond to crime while respecting the rights and privacy of our community.

For questions regarding the FLOCK LPR program or its use within Cheyenne County, please contact the Cheyenne County Sheriff’s Office at 719-767-5633.
