## **Seneca police end Flock camera contract after less than 90 days**

Feb 19, 2026

SENECA, MO. - (KOAM) — The Seneca Police Department has ended its contract with Flock license plate readers after operating the surveillance cameras for less than 90 days, citing poor customer service and security concerns.

Police Chief James Altic made the decision to remove two cameras that were installed in mid-October 2025, roughly three months after the department signed the contract in February 2025.

"We need full answers," said Altic. "These cameras cannot be compromised. And until we are 100% sure they can't be compromised, we're not going to be a part of the system."

The department's experience with Flock began when Chief Altic noticed the rising popularity of the license plate reading technology and thought it could provide a useful tool for his department. However, problems emerged almost immediately after installation.

One of the two cameras never functioned properly, according to Altic. The malfunctioning equipment was consistently marked with service tickets, but the department struggled to get assistance from Flock's customer service team.

"We couldn't get calls back," he said. "We couldn't get any feedback. It just wasn't working out real well. There was always a ticket attached to it for service. It was it was a little bit rough, and nobody would reach back out to us, wouldn't contact us."

Beyond the technical and customer service issues, Chief Altic expressed concerns about reports of camera misuse throughout the country. These reports reinforced his decision to discontinue the program.

"There will have to be some legislation passed," he said. "There should have to be some better guidelines down the road. We do not want to be put in a position where there could possibly be anybody in the area that could get these cameras compromised."

Chief Altic stated he has no plans to bring similar license plate reading technology to Seneca unless companies can adequately address issues and concerns. He maintains that during the brief time the cameras were operational, he had no knowledge of any misuse within his department.
