Significant Success Story

In the spring of 2025, Auburn Police responded to a call for service which resulted in a homicide investigation. During the investigation, APD personnel learned that a specific vehicle was used by the suspects to flee the scene. Using city owned camera footage, APD personnel managed to obtain some video of the suspect vehicle, but the clarity was limited, only allowing APD personnel to gather a general description of its make and model.

However, when APD personnel searched the Flock Safety Camera system in our city, a matching make and model was quickly located, which provided APD with a license plate number. By combining the information from the city owned camera systems with Flock, APD personnel were able to confirm the exact vehicle involved in the homicide. Within six hours, APD personnel entered the license plate into a WA State system as a Be On the Look Out (BOLO) for the awareness of all law enforcement.

Later that day, an officer from an outside agency found the suspect vehicle abandoned on the side of the road. Thanks to the quick identification of the vehicle, APD personnel were able to collect very valuable evidence. This success would not have been possible without Flock. The suspect in the homicide was later arrested and booked into jail.

Recent Success Story

In June of 2026, an Auburn PD officer conducted a preliminary investigation of a vehicle prowl incident. During that investigation, the officer attempted to conduct a traffic stop on a vehicle to interview the driver and sole occupant. The vehicle fled and the officer made the appropriate decision to self-terminate the vehicle pursuit due to the risk posed by the driver's actions but was able to articulate the crime of attempting to elude a police vehicle, a class C felony.

Within hours on the same day, the officer was able to use Flock to locate the vehicle in the Covington area. While preparing the vehicle for impound and evidence processing, the officer noticed the driver walking in the area and contacted him. The driver was subsequently arrested and booked into jail. A search warrant was executed on the vehicle, and a loaded firearm was located inside. The driver's criminal history contains numerous felony convictions. This is an

example of fantastic police work involving great decision making by the officer. What initially appeared to be a low-level property crime, quickly escalated into a dangerous incident. In this incident, Flock significantly enhanced the ability of law enforcement to provide efficient resolution to a criminal case involving a firearm and holding a subject accountable according to the law.

Network Sharing Policy

> We share statewide only.

Number of Searches (Definition)

> How it differs from the Organization Audit:
> The Transparency Portal number is often lower than what you'd see in the Organization Audit CSV. This is because:
>
> - The Transparency Portal de-duplicates repeated activity, e.g., if a user runs essentially the same search multiple times within the same hour (refreshes or minor tweaks), it counts as one.

> - The Organization Audit counts every individual search action, including refreshes and minor parameter changes, to provide a complete audit trail.
