

Loveland OH PD Transparency Portal

Last updated: Wed Oct 21 2026

Loveland OH PD utilizes retroactive search to solve crimes after they've occurred. Additionally, Loveland OH PD utilizes real time alerting of hotlist vehicles to capture wanted criminals. In an effort to ensure proper usage and guardrails are in place, they have made the below policies and usage statistics available to the public.

Community Impact

Featured Success Stories

Success Story

The Loveland Police Department successfully apprehended a felony theft suspect just hours after a bank night deposit box was targeted, thanks to critical investigative data provided by the Flock Safety camera network.
The suspect fled the scene in a vehicle before officers arrived, leaving investigators with minimal physical evidence and no immediate eyewitness identification of the license plate. Detectives utilized the city's Flock infrastructure to perform a localized search during the exact timeframe of the incident. The Flock system successfully isolated the suspect's vehicle, capturing its license plate and distinct vehicular characteristics despite the low-light conditions. This data allowed investigators to immediately identify the registered owner using other available law enforcement data bases and locate the suspect within hours.
Without the precise, objective leads provided by the Flock Safety system, identifying a suspect vehicle in the dark would have taken weeks of traditional investigation. Instead, we removed a dangerous offender from our streets in several hours.

Success Story

A vehicle was involved in a crash and the suspected drunk driver fled the scene. A Flock camera near the crash scene captured the vehicle and officers were able to quickly locate the suspect vehicle and driver. Without the information obtained from the Flock camera it is unlikely this vehicle or person would have been located.

Success Story

LPD received multiple alerts on a vehicle associated with a missing person from Illinois. Officers were able to locate the vehicle and confirm the missing person was safe. The entering agency contacted family members who were thankful to learn their missing loved one was found and in good health.

Success Story

LPD officers received a Flock alert on a vehicle stolen from Miami Township (Clermont), Ohio. Officers were able to use the information, locate the vehicle a short time later, and confirm it was an active stolen vehicle. Although the driver fled on foot, an apprehension was made, and the subject was charged with Receiving Stolen Property.

Success Story

Officers stopped and arrested two subjects for stealing mail from a Loveland residents' mailbox. Detectives searched the Flock database, and it provided information on the subject's movements through multiple states. The suspects were ultimately charged with multiple counts of felony theft for crimes in Loveland and face additional federal criminal charges from the US Postal Inspection Service for crimes in several states.

Success Story

LPD received a report of a Breaking and Entering offense at a downtown business. The only lead was a general time frame and a video image of a hooded suspect inside the establishment.

Utilizing the Flock database, officers worked to establish a list of vehicles in the area around the time of the offense. Their efforts produced a list of approximately 32 vehicles including one related to a previous employee. When interviewed the suspect admitted to multiple offenses.

The Flock information saved numerous investigative hours and enhanced the officer's ability to advance the investigation much faster than if forced to review hours of surveillance footage.

Success Story

Officers received an alert on a stolen vehicle entering Loveland. The Flock photo showed the vehicle on the back of a car hauler and officers located it in a local business lot. Through investigation, it was determined to have been bought at an auto auction in Minnesota by a third party and was in the process of being transported to South Carolina to the internet purchaser. The recovered stolen vehicle was originally taken in North Dakota and information was passed on to the entering agency who will continue the investigation.

Success Story

LPD responded to a theft from a downtown business and obtained a description of the suspect vehicle. Using Flock, officers were able to identify the license plate. This information led officers to locate the suspect who was subsequently charged in connection with the theft from the downtown business.

Policy & Trust

What's Not Detected

> Facial recognition, People, Gender, Race

Acceptable Use Policy

> Data is used for law enforcement purposes only. Data is owned by Loveland OH PD and is never sold to 3rd parties. Data is stored for 30 days, deleted, and is not recoverable.

Prohibited Uses

> Immigration enforcement, traffic enforcement, harassment or intimidation, usage based solely on a protected class (i.e. race, sex, religion), Personal use.

Access Policy

> All system access is limited to authorized department staff based on their assigned roles and job responsibilities, following the principle of least privilege. Access requires a valid law enforcement purpose and is logged indefinitely, allowing for compliance audits and verification. To further safeguard this data, our agency utilizes multi-factor authentication (MFA), which requires additional identity verification before access is granted.

Hotlist Policy

> Hotlist hits are required to be verified prior to action by officers.

Myth vs. Fact

Myth

Flock has been hacked.

Fact

Flock's cloud environment has never been breached. Flock invests in a strong security posture, including adhering to NDAA, SOC2 (Type II), ISO 27001, ISO 27018 FedRAMP 20x, and Higher Education Community Vendor Assessment Tool (HECVAT) compliance. Additional security precautions include Role-Based Access Controls, data encrypted at-rest and in transit, required Multi-Factor Authentication, and regular penetration testing.

Myth

Flock sells and/or shares customer data.

Fact

Your community owns 100% of your data and it will never be sold. Only your agency decides who to share your data with, not Flock. Flock Safety does not publicly release agency search data. Flock does not operate or support any public-facing searchable database of law enforcement lookups, and we do not provide license plate search histories to websites or third parties without the agency's knowledge and authorization. Other agencies who you share footage with have been responding to FOIA requests and sharing this search data.

Myth

My data is fed into a national database.

Fact

Myth

Flock cameras use facial recognition.

Fact

Each agency controls access to its own data. Agencies may choose to share information through a broader network, but nothing is shared automatically. Participation is opt-in, governed by defined agreements, and limited to lawful investigative purposes.

Flock cameras do not use facial recognition technology. Searches are based on vehicle characteristics, and not identity. Flock cannot recognize, identify, or track individuals. It is purpose built for specific public safety investigations, not to monitor people.
